Joseph Davis Chamdani

(425) 545-7708 | joseph@joechamdani.com | linkedin.com/in/joseph-chamdani | github.com/JosephDavisC | joechamdani.com

Education

University of Washington — Seattle, WA

Bachelor of Science in Informatics, GPA: 3.96 — *Expected June 2027*

- Dean's List, Fall 2025 to Spring 2026 and Annual 2025 to 2026. Alan R. Spence Transfer Support Fund, UW merit scholarship (May 2026).

Experience

AI Product Intern — Jul. 2026 – Sep. 2026

Whitespace Solutions — *Jakarta, Indonesia*

- Built and shipped features end to end on a live AI sales-training platform, across the database, the backend API, and the React front end.
- Built semantic search for the product's knowledge library on its shared embedding and vector layer, with hybrid ranking, a relevance floor and an AI-label check. Fixed a vector-store bug that silently lost writes and a failure that made chat answer "no knowledge" on a full library.
- Owned the product side alongside the code: drove competitive analysis of 4 US and APAC sales-enablement platforms that directly informed a company-wide repositioning, and presented live demos to shareholders and enterprise prospects.

AI Research & Development Intern — Aug. 2025 – Feb. 2026

Sector Cybersecurity — *Jakarta, Indonesia*

- Reduced penetration testing time by 30–40% per engagement by building a 3-tier AI vulnerability classification system (label matching, Random Forest on 100K+ findings, pattern fallback) deployed across 5 testers.
- Wrote 3 AI security research reports that Sector published, including "AI vs Human Hacker: Who Wins?" (2025).
- Made processing of operational security data faster than the team's manual regex rules by training AI models on it.

AI Engineer Intern — Jul. 2024 – Sep. 2024

Stockbit — *Jakarta, Indonesia*

- Shipped an OCR-based KYC pipeline and fraud detection models to production serving 10K+ documents daily, improving KYC approval speed by 40% and reaching ~95% fraud-detection accuracy.
- Built an in-house Python API on Google Cloud that served our machine-learning models to production backend services.
- Improved model accuracy by 15% and reduced processing time by 40% by engineering BigQuery and AWS pipelines across 1M+ records.

Projects

AI Transfer Evaluation Tool | *Next.js, TypeScript, React, Claude API* — Nov. 2025

- Won **1st place** at the Anthropic Claude Hackathon (Claude Builder Club at UW) with an AI system that parses WA community college transcripts into instant UW-equivalency reports. Live at transfer.joechamdani.cloud.

IShowStream (hackathon team project) | *Go, Python, Google ADK, Firestore, Cloud Run* — Nov. 2025

- Built with a hackathon team: a real-time Twitch chat assistant where five AI agents filter spam, rank messages, and surface trends and insights for the streamer, on a Go and Python backend. Code at github.com/JosephDavisC/IShowStream.

Personal Dashboard (open source) | *Next.js, TypeScript, PostgreSQL, Prisma, Docker, Claude API* — Feb. 2026

- Built the dashboard I run my week on (calendar, tasks, campus shifts and pay, job applications, diary): live on my own server by day 3, in daily use since February 2026, and now open source. Code at github.com/JosephDavisC/Personal-Dashboard.

Dragon Dance Collectibles | *React 19, TypeScript, Supabase, Tailwind v4* — 2026

- A bilingual catalog site for a Jakarta Pokémon card store, with WhatsApp purchase links and a self-serve admin panel, delivered end to end as a paid client project. Live at dragondance.id.

Leadership & Community

Technical Officer — May 2026 – Present

Software Engineering Career Club at UW (SWECC) — *Seattle, WA*

- Help run the club's career events and keep its website updated. Helping organize its spring 2027 mentorship cohort.
- Maintainer and mentor for SWECC Labs, the club's student project program: maintain its project repositories on GitHub and meet 1:1 with members who need help on their projects.

President — May 2024 – Jun. 2025

Bellevue College Tech Club — *Bellevue, WA*

- Grew active membership from 20 to 35+ students by leading 15+ technical workshops, and organized BC Hacks 2024 (160+ participants, 24 submissions, 12 volunteers, 6 judges).

Technical Skills

Languages: Python, TypeScript, JavaScript, Go, Java, C#, SQL, HTML/CSS
Frameworks & Tools: React, Next.js, Node.js, FastAPI, Flask, PostgreSQL, Supabase, Docker, Prisma, Tailwind
Cloud & AI: GCP, AWS, Cloudflare R2, BigQuery, Firestore, Claude/OpenAI APIs, LangChain, Scikit-learn, Claude Code
